# unext

# Internship as a Service

~Crafting Your Professional Path

# Internship as a service – Technologies covered

# Internship as a service – Delivery Flow

12 weeks (12 sprints) each sprint shall have epic goals

Milestones set every week to assess participant's progress

Mentors assigned to guide participants throughout the project

### Internship as a service - Competencies

NFR

Security

Accessibility

Engineering

**Practices** 

Usability

### Pre - requisites

#### **Foundation**

Track	Git/GitHub	Java	Maven
		Python	pip
		GO	modules
		NodeJS	npm

Database		Backend	Frontend
SQL	NOSQL	SpringBoot	ReactJS
		Django	Angular
		ExpressJS	Vue
		Laravel	ReactJS
		Gin	Flutter

With Prompt Engg – Github Copilot / Tabnine / AWS etc

### **Competencies**

Design Document, Response Time, Page view time, Throughput, Availability, Concurrent users, CI/CD Pipelines, Release wise pipeline configuration, Failure alerts, Error Handling for Microservices, Logging and Monitoring, High availability 99.99%, Testing of HA with relevant tools

Secure Access, Secure Data Access, Security Standards (OWASP / GDPR), Handling PII Data

Responsive web design, accessibility design, Error Page Management, Email Notifications for Server Downtime, Interoperability

Volumes Test data preparation and management

100% Method Coverage, 95% Block/Line Coverage, Code Quality, Code Complexity, CPU & Memory Profiling, Unit Test Reports, Monitoring & Alerting, Release Cadence, Feature Release, Subsequent Bug-Fix Release, Subsequent Prod Release, Subsequent Patch Release (if any), E2E testing, BDD Approach for testing

Cloud Deployment, https / ssl , DNS Management

Intuitive & Accessibility, SEO compliant, RWD, Localization, WCAG 2.x ,Offline Functionality

- > Participants are expected to have the pre-requisite skills
- A pre-assessment based on the Pre-requisite skill sets will be carried out and participants who don't meet the required criteria will be suggested to take a refresher course of 5 days duration.

## **Learner Journey** (1/2)

Week 1 Week 2 Week 3 Week 4 Week 5 Week 6 **Epic Goals Epic Goals Epic Goals Epic Goals Epic Goals Epic Goals** P R E Implement security measures such To setup the development To build the secure and sustainable Optimize application performance for Set up automated deployment Set up automated deployment as encryption, data validation, and faster load times, efficient resource environment, for backend and frontapplication which can be scalable pipelines for CI/CD to streamline the pipelines for CI/CD to streamline the protection against threats. And with cloud formation & follow utilization. release process with cloud end services release process. w orking with the system capability ASSESSMENT engineering principles checks **Functional Delivery Functional Delivery Functional Delivery Functional Delivery Functional Delivery Functional Delivery** (Includes FE/BE) (Includes FE/BE) (Includes FE/BE) (Includes FE/BE) (Includes FE/BE) (Includes FE/BE) Building application user Build functional stories BE/FE Setting up application with stories FE/BE Setup application with caching Building application user stories Building application user HelloWorld application FE/BE Build application with TDD first stories FE/BE Building unit test cases and approach with relevant tools Building application user analysing the reports to pass stories FE/BE the build with CI/CD Non-Functional Non-Functional Non-Functional Non-Functional Non-Functional Non-Functional Delivery Delivery Delivery Delivery Delivery Delivery

Scaffold the project, with proper folder structure (for FE/BE) + best practices.

Containerize the application which is scafolded

100% Method Coverage 95% Block/Line Coverage Code Quality Code Complexity Setup cloud(to be discussed) architecture

Testing application with load testing stress testing, regression, sanity testing Setting up quality gatew ay with tools like SonarQube to setup CI/CD pipeline

Parameterizing the application for dev/text/prod branch

Creating appropriate tags for the build when fails

Release w ise pipeline configuration.

Failure alerts

Error Handling for Microservices

Secure Access (Authentication and Authorization)

Secure Data Access

Handling PII Data

Scheduled Mentor Connect: Mentor Guidance every week (4-6 hours per week)

## Learner Journey (2/2)

Week 7 Week 8 Week 9 Week 10 Week 11 Week 12 **Epic Goals** Epic Goals Epic Goals Epic Goals **Epic Goals Epic Goals** Implement security measures such Buafixes, w orking on release Ensure the application adheres to Implement backup and recovery to Implement monitoring and logging Ensure compliance with relevant as encryption, data validation, and cadence, release notes safeguard user data against loss or regulations and standards regarding accessibility standards for users with solutions for tracking application documentation (application, user protection against threats. And disabilities follow WCAG2.x corruption. health and performance. user data privacy and security w orking with the system capability documentation) checks **Functional Delivery Functional Delivery Functional Delivery Functional Delivery Functional Delivery Functional Delivery** (Includes FE/BE) (Includes FE/BE) (Includes FE/BE) (Includes FE/BE) (Includes FE/BE) (Includes FE/BE)

#### Non-Functional Delivery

Building application

user stories FE/BE

Testing the data with volumes (min 1 million)

CPU & Memory Profiling

Monitoring & Alerting

### Non-Functional Delivery

Building application user

stories FE/BE

Responsive web design
Accessibility design
Error Page Management
Email Notifications for Server
Downtime
Interoperability
Intuitive & accessibility
SEO Compliant, RWD
Localization / work with i8n
standards

#### Non-Functional Delivery

Setting up backup mechanism for database with replfactors

Building application user

stories FE/BE

Working with application to scale instances more than 1, ensuring there is no downtime.

Delayed backup

#### Non-Functional Delivery

Building application user

stories FE/BE

Trigger the build failure on communication.
Failure alerts
Error Handling for Microservices
Logging and Monitoring
High availability 99.99%
Testing of HA with relevant tools

NA

Non-Functional

Delivery

Security Standards (OWASP/

GDPR)

Handling PII Data

#### Non-Functional Delivery

NA

Release Cadence Feature Release Subsequent Bug-Fix Release Subsequent Prod Release Subsequent Patch Release (if any)

### Scheduled Mentor Connect: Mentor Guidance every week (4-6 hours per week)
