Generative AI

REIMAGINING WORK & PRODUCTIVITY IN THE AGE OF AI

Employee attendance tracking systems are relics of the industrial age. Introduced in the early 1800s, productivity was synonymous with the volume of goods manufactured by laborers on a daily basis.

This is the Information Era. Does the 9-5 grind still find relevance?

In the phase of automation, AI, and GenAI, do we need to keep hours stared at our screens as a measure of workplace productivity?

UNLOCKING HUMAN POTENTIAL WITH AI

AI is not a replacement but a tool to empower professionals. It's the productivity super-catalyst enabling individuals to accomplish more in a short time.

A PwC research reveals that AI can supercharge employee productivity by 40%.

Another Nielsen Norman study shares that customer service professionals are 13.8% more productive when they use AI tools.

The report also reveals that developers who leveraged AI completed 126% more projects per week.

ENDING THE WORK HOURS DEBATE

Automation has freed us from redundant tasks, empowering us to emphasize strategic thinking, innovation, creativity, and conflict resolution. To fully leverage the potential of AI, tailored training programs to equip employees with cutting-edge AI skills are inevitable.

Through effective talent transformation initiatives, we can:

FOSTER AUGMENTED INTELLIGENCE

Enable AI to draft reports, analyze data, and dedicate human hours for high-level tasks

ADDRESS THE WHYS

Dealing with the *whys* rather than *hows* with AI to foster deeper understanding of their tasks

NURTURE A TECH-FIRST LEADERSHIP MINDSET

Fast-track digital transformation initiatives by having forward-looking leaders who understand the power of AI

PRIORITIZE EMPLOYEE WELLBEING

Use AI to assist in mental health support, implement stress management programs, and foster a healthy work-life balance

THE FUTURE OF WORK IS NOW

As we make redundant job roles obsolete, now is the ideal time to rethink our approach to work and its future. Extended work hours are no longer badges of honor but a counterproductive culture that only yields diminishing productivity, increased errors, and an inevitable burnout.

This is the perfect time to make work hours as productivity metrics obsolete through AI empowerment. Nurture a culture of continuous learning and employee development with UNext's best-in-class AI programs for all hierarchies.

Focus on outcomes, become more agile, and champion a forward-looking culture with us today.

In 2024, UNext enabled 20 large enterprises, skilling more than 4,000 employees and leaders only in AI/Gen AI domain in India.

Flagship AI Programs Implemented

- AI Solution Architect Training Program
- AI Strategist Program
- Gen AI For Sales & Marketing Program
- AI Academy Bootcamp Program
- Advanced AI Program and more

Program Standouts

- Experiential learning modules
- AI veterans and seasoned professionals as faculty
- Learner inspired training programs
- Sandbox labs and simulative environments
- Industry and business-native case studies and more
